

Action

Purpose: Wildfires are very dangerous and you can contribute to their damage they bring poor air quality that affects people in different but awful ways. How do they work? How am i contributing to this? How can we stop this? You may be asking, you see wildfires and poor air quality are caused by us when we light fireworks, hold campfires, off road vehicles (Hot exhaust and sparks form the exhaust). Poor air quality is also caused by us by a mixture of pollutants from human activities, fuel burning applicants that we use.

Now how do we fix this? Easy we can do the opposite of what we are doing, stop lighting firewoks towards forests or in forest, stop holding campfires in forests and instead hold them in metal fire rings in managed compounds, on bare sand or mineral soil away from root systems. How about Air quality? Reduce pollution by using recycle systems, eliminate or limit burning wood and smoking.

See how easy it is to prevent and even stop death, poor organs, property damage and even emotional damage.
