The Global Connection: The UN target connected to our issue is goal 13. Goal 13 is titled Climate Action which means to combat climate change and the way it impacts us by reducing greenhouse gas emissions. We also believe that goal 3 (Good Health and well being) is connected to our issue because our issue affects peoples health and absolutely affects peoples well being.

Smoke affects different groups in different ways, it increased risks of SIDS, high risk of asthma, respiratory illness. It affects adults health by increasing the risk of being prone to various cancers, heart disease and strokes. It affects people with respiratory problems by causing immediate breathing problems like wheezing, coughing and chest tightness.

Human Impact: As seen in the story that Larry Walker shared with CBC, In upper Tantallon N.S. Larry said after he got the alert to evacuate he put his prized guitars in his car. His neighbours screamed at him to get out of there urgently for his safety, he didnt even grab his phone because of the intensity of the fire he said to himself "Get out of here idiot your going to die if you dont" . He had to drive around a car burning in flames to get out of there. People saw their neighbours houses on fire and even more saw cars on fire. Another resident Landry got out of bed and looked out the window too see orange clouds of smoke in the sky and she said "it was quite scare."

Future Report: According to the article from OUTSIDE by Erica A. Langston. Wildfires will be six times larger. The annual amount of areas burned would be increased by 500 percent . In a generation the lanscape of most forests would reshape not just because of fires but also because of droughts. The researchers compared their research 2010 to 2039 to the last one they did 2004 to 2014 and it verified the accurcay of this study (This information is for 2038)
