Human Impact: A section for the "Lived Experience" narrative.

Angela Riley is a volunteer in Nova Scotia that participated in shoreline cleanups to remove abandoned fishing gears. She collected lost lobster traps, ropes, and nets that had been left in the ocean, some of which were still trapping marine animals, she described it was very sad and devastating for her of how grief she feels about those dead innocent animals.

Future Report: A section for the 20-year prediction.

After 20 years I believe the ghost fishing gear would be much better than now, because in the future the technology would become better, I believe the Nova Scotia government is also working hard to try to solve this problem for as much as possible. But however I still don't think the entire problem would be solved completely, the ocean is very big, and it is very hard to get rid of every single one of them.
