

Response

Purpose: Analyzing current government effectiveness.

The current government is doing a very good job and effective but still facing challenges, they had taken actions to remove lost fishing gear and work with organizations, but the problem has not been fully solved. After they'd done this the results include: that Over 739 tonnes of ghost gear have been removed from Canadian waters since the program began, 63 tonnes were removed in a single year from water near Nova Scotia.

The screenshot shows a web browser displaying a news release from the Government of Canada. The browser's address bar shows the URL: [canada.ca/en/fisheries-oceans/news/2021/12/canadas-ghost-gear-fund-delivering-results-for-cleaner-oceans.html?utm_source=chatgpt.com](https://www.canada.ca/en/fisheries-oceans/news/2021/12/canadas-ghost-gear-fund-delivering-results-for-cleaner-oceans.html?utm_source=chatgpt.com). The browser's toolbar includes icons for Google Translate, YouTube, Home, Blooket, Scratch, and Duolingo. A search bar with the text "739" is visible. The news release is titled "News release" and dated "December 2, 2021". The text of the release discusses the Ghost Gear Program, which aims to remove abandoned fishing gear (ghost gear) from the oceans. It mentions that over 739 tonnes of ghost gear have been removed since the program began in 2019, and that 63 tonnes were removed in a single year from water near Nova Scotia. The release also states that the program has helped recover approximately 5,828 units of lost gear, with 84 per cent being traps or pots and 16 per cent being nets and longlines. The release concludes by stating that the Ghost Gear Program was launched in 2019, and included the \$8.3 million Ghost Gear Fund. Budget 2021 announced an additional \$10 million in funding for the program for 2021-2022. Since the launch of the Program, partners who received funding through the Ghost Gear Fund have been able to recover approximately 5,828 units of lost gear. Most of the gear retrieved —approximately 84 per cent—were traps or pots that are commonly used in lobster and crab fisheries, and the remaining 16 per cent was a combination of nets and longlines from various fisheries. Derelict gear from non-operational aquaculture sites was also retrieved from the Pacific and Atlantic coasts.

An "Evidence" block (for laws/stats).

A visual "Status Badge" or dropdown area for you to select **Effective**, **Insufficient**, or **Developing**.

The Nova Scotia government currently is doing a very great job of trying to solve this big problem, but still they haven't yet solve the entire thing yet, there's still remaining stuff like fish nets in the ocean, which means it's currently developing.
