

Super Powers

Outcomes

Students will be expected to:

- 9.1 analyze their health needs in times of change and apply strategies that enhance their capacity to manage change in their lives.

Topic

Life skills, resilience, seeking help.

Materials

- Pieces of paper with “villains” on them (see Appendix)
- Pieces of paper with “super powers” on them (see Appendix)

Background

- Clear a large space on the floor inside of a circle of chairs.
- Explain the activity to one student prior to the activity and ask him/her to volunteer first.
- Place “villains” in a large circle and “super powers” in a larger circle around it.

Activity

- Check in question: If you could have one super power, what would it be?
- Explain that we are worried that as students move into high school they could succumb to certain pressures (villains) but that they may have some protective strategies (super powers) in place to help them fight back.
- Have a student explain each of the villains.
- Ask for a volunteer to walk 2 laps inside the circle; one to list the villains they think they will face and the next to list the super powers they have already or will need to develop to help.
- Repeat using a new volunteer until several people have had a turn.

Super Powers, cont.

Discussion

- Which super villain is the toughest and which super power is the most important?
- What can you do to build some of these super powers if you don't have them already?
- Are there any other super powers or super villains that belong in this list?
- What can prevent someone from using a super power?
- How can you make sure you know your super powers and the appropriate time to use them?
- Check out question: How did this session make you feel?

Extensions

Here are ways to modify the activity:

- Have students write scenarios using the super powers and villains. e.g. "A boy was abusing alcohol but was able to ask for help and overcome it because he had close ties to his family." Encourage them to be creative.
- Have students who didn't volunteer write their superpowers from the activity and how these will be protective for them.
