

Canada's Response

Purpose: Analyzing current government effectiveness.

The Government is doing a few things to combat this issue where youth are struggling to find job opportunities, here are a few things they are doing:

The first thing the Canadian Government is doing, is setting aside [\\$635 million over 2026-2029, for around 50,000-60,000 "work-integrated learning opportunities"](#), essentially this is for training skills and attempting to locate short-term job placements, for students within the highschool age group (14-18).

Additionally, the Government provides FREE training programs for youth (17 and younger) to help give youth the upper hand on obtaining a job, to help support these minorities to provide them with opportunities to work as youth. 2 massive programs that are provided via the government are the "Options and Opportunities" and First Aid courses.

The O2 program (Options and Opportunities) helps provide you with job placements and give you real life working experience, which can carry on to post secondary and aid you with community connections within the community to help provide work later.

[First aid programs](#) that are provided free of charge are Minor and Intermediate first aid courses. These courses previously were not free, but in 2025 the Government recognized many youth jobs may require first aid, so they provide these courses for free to help encourage youth to get a job.

Doing this is a direct attempt to support and aid youth in providing job opportunities.

In conclusion, the response is effective towards the youth because of how much budget the government is setting aside showing the importance and how well the programs being funded are helping those within the youth in search of a job.

Youth unemployment rate in Canada

[Home](#)[Log](#)[Response](#)[Action](#)[Reflection](#)

This is the Youth Unemployment Rate in Canada from 2000 - 2024 showing the alarming rate of unemployment comparing those aged 15 - 24 and those in general unemployed.

The highest rate shown for unemployment among those aged 15 - 24 is 30% in 2020 during the Covid era compared to those in general unemployed having the peak at 15%.

This rate shows how much we should pay attention to youth unemployment and give more opportunities to the youth seeking work.
